BRYSTON

MEMO: To all Bryston Customers SUBJECT: Stereophile Class A Ratings

September 2006,

Bryston is pleased to report that STEREOPHILE MAGAZINE has awarded the **Bryston SP2 Preamp/Processor** and the **Bryston 9B SST Amplifier** a **CLASS 'A'** rating under Recommended Components in the October issue. Please find below their comments.

Bryston SP2 Preamp/Processor:

“A contender for audiophiles who want the best of both worlds,” the SP2 mates a topflight analog preamp with a flexible, state-of-the-art digital processor, and adds an outstanding stereo DAC. Without conflict, complexity, or compromise, the SP2 offered sound quality that was “as good as it gets.” KR: “For performance and value, it’s hard to fault.” “An audiophile pre/pro,” he sums up. (Vol 29 No.9 WWW)”

Bryston 9B-SST

“The 9B-SST power amplifier (called 9B-THX at the time of the review) boasts five channels, 120Wpc into 8 ohms, and is built like pro gear; ie, like a tank. Hand-soldered, double-sided glass-epoxy boards and elaborate grounding scheme from special-grade steel toroidal transformers. According to JA, “the excellent set of measurements indicates solid, reliable engineering.” LG was impressed by this amp’s speed, power, extension, its tightness and definition in the bass, and its “excellent” midrange. Fully the equal of more costly amps, with wide dynamic contrasts and “involving” vocals, and sonically similar to previous Bryston ST amps. THX conformance, a 20-year (!) warranty, and a reasonable price make this beefy, reliable amp an attractive package—a perfect choice, suggests LG, for home-theater and multichannel music systems. KR’s long-term multi-channel reference. (Vol.23 No.9 WWW)”
